Setup

STEP 1

Remove the smoke detector from its base by twisting it counter-clockwise *(fig 1)*. Next, insert three AAA batteries *(fig 2)*.
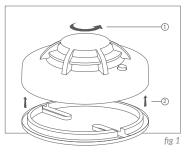

STEP 2

Reference the chart in the install instructions to see the recommended locations around your home to mount the alarm. With a location selected, use the two screws to secure the base to the ceiling *(fig 3)*. Then fit the smoke detector inside the base *(fig 4)*.
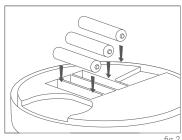

Then, reinstall the alarm onto the mounting base by turning it clockwise until the meeting marks line up with each other.
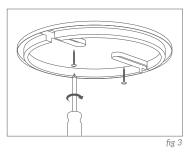

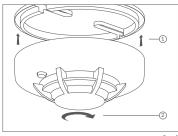

STEP 3

IMPORTANT: While the Go!Control panel is in **SYSTEM TEST**, press the detector's TEST HUSH button for approximately 10 seconds, continuing holding down the button until you hear 4 sets of short beeps (10-12 seconds) *(fig 5)*. Release the button after the beeps have sounded. Lastly, verify that the signal was received at the control panel.

*Note:* It is recommended you clean smoke sensors every six months.
