Enroll

STEP 1

a. Move the Remote Temperature Sensor within 5 feet of the panel.

b. *Press* `SERVICES` from the home screen of the 2GIG panel.

c. *Select* `Z-WAVE` .

d. *Press* 🔧 on the bottom right corner and enter the Installer Code.

e. *Select* `ADD DEVICE` . The panel will say "discovering devices."

STEP 2

a. On the Remote Temperature Sensor, *press* the enroll button twice. The 2GIG panel will now say a device has been discovered querying device information.

b. Once the Node ID and Manufacturer information appears, the device will be completely learned into the system.

c. Once paired, the light on the device will go solid white.
