Setup

Note: Skip setup steps 1-3 if this isn't your first TS1.

STEP 1
Power down Go!Control panel *(unplug transformer and disconnect battery)* . With panel back plate off, remove existing transceiver *(silver rectangular module with black pad on top)* by lifting the module straight up.

STEP 2
Carefully install the XCVR-345 transceiver included with TS1 *(silver rectangular module with an orange antenna).* Ensure all pins are connected.
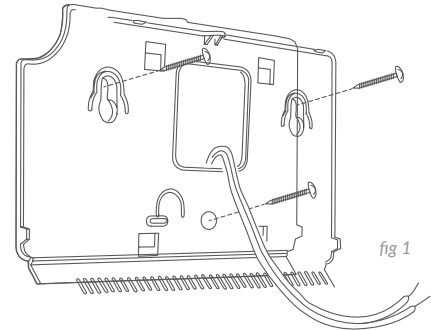

Note: If module isn't seated correctly, you will see "loss of sensor supervision" alert on panel upon power up. To resolve, power panel down and correct position of module.

STEP 3
Reconnect and plug TS1 transformer back into non-GFI AC outlet near Go! Control panel for ease of programming.

Note: You can move TS1 to permanent location after programming.

Mount

fig 1

STEP 1
Use the three screws and anchors supplied to attach mounting plate to permanent wall location *(fig 1).*

fig 2

STEP 2
Plug in power supply to outlet, and use one of the provided brackets to secure power supply *(fig 2).*
